The new GSR 8/900

Marking 25 years of cocoa machinery at Interpack

For the past 25 years, GSR has continued to develop its range of machinery and accessories for pressing cocoa, with the company releasing new equipment at this year's event in Dusseldorf.

As Italian cocoa machinery manufacturer GSR explained, for its presence at Interpack 2017, it has left nothing to chance in its preparations.

Behind its attendance this year is an awareness of the need to respond to the today's market's requirements, which it has recognised through a detailed study of production trends across the industry.

It will be unveiling its 8/900 press for the "big show" of the year: a strategic choice, driven by the aim of satisfying the necessities of a growing market for specialised equipment within the sector.

The 8/900 belongs to the GSR high production cocoa presses, however, by being the smallest among these, it simultaneously approaches to the compact line. This aspect drives its additional value: a press able to guarantee the right qualitative mix by incorporating the properties of both series, setting itself between the

productive philosophy of the "bigger sister" series 900 and 980 and the compact lines 870.

With a production capacity settled up to 650 Kg/h, its low and reduced total cost operation, it's easy and fast to install, its manufacturing structure is similar to the high production presses matched with an high versatility (it could, thus, be suitable to press cocoa liquor, hazelnut paste, oily seeds and similar products where the fat extraction is necessary) make this press a perfect combination of diversified qualities.

The 8/900, from its introduction into the GSR product lines, represented the right complement to the series designed and developed for the high production: it is the smallest press among the series 900 but with an high core potential able to serve the demands of the medium production.

As all the presses manufactured by GSR, the 8/900 respects the rigorous global standards required

by the company's management: quality at first, an Italian design able to ensure ergonomics and constant hygiene, essential aspects for a perfect production cycle.

Moreover the special profiles in compliance with the energy saving and safety requirements characterised the equipment with the GSR standards of efficiency and reliability.

Since 1992, GSR, which has been offering dedicated solutions for customers operating in the cocoa processes, in 25 years of activity has globally established its brand in a growing competitive sector by designing equipment, machinery, accessories as well as upgrades and spare parts.

GSR is attending Interpack in Hall 4 - Booth C34, with a stand aimed not only for the exposure of the press 8/900 but also able to carry the guests in a true journey on the mechanical and engineering ground.

Its booth developed for the 2017 show aims to demonstrate the professionalism and attention to details with which the company, made in Italy, has excelled in the sector, obtaining its place among the bests thanks to its strong identity at the basis of the known motto "Yes we A.R.E."
