Technology with spirit and vision

In the past few years, GSR Cocoa Machinery has always proved to be a forward-looking business, able to turn its ideas into valuable solutions, standing out from the market.

Innovation is considered a vital competitive advantage, and the company's R&D department works to bring added values on existing products.

There, the crucial dynamics of the cocoa and oilseed industry are constantly analysed and studied to identify the trends, thus enabling GSR Cocoa Machinery to dynamically react by engineering state-of-the-art pressing line.

"Keeping up with times is a duty, anticipating them the greatest and realistic ambition"; said Luigi Turla, CEO and Founder of GSR, which he believed incorporates the spirit and vision of the company.

Through the company's collaboration with all its business' stakeholders, it has developed customer-tailored solutions that bring together all Italian firm's know-how.

GSR Cocoa Machinery's expertise goes beyond normal corporate boundaries and leverage different core competences and various perspectives: the capabilities of highly qualified personnel, the participation in the most important sector debates, and above all, the collaborative attitude with all

the company's actors constitutes a large set of variables that ensure GSR ability to master the global vision of its industry.

This kind of shared knowledge coupled with engineering and digital development has prompted the company to work meticulously on the improvement of its press safety systems, even in view of a future that will require higher safety standards.

A development triggered without forgetting, however, the increasing productive necessities required by the customers. Thanks to the new integrated system, GSR customers' thus obtain a reduction in operator's intervention; they will work on the latest generation machine, while obtaining significant and easy-to-read data useful for the setting of a perfect processing cycle.

For GSR, it is of utmost importance to guarantee the best for its pressing lines: for this reason design is subjected to strict studies and controls. The surfaces, the connected profiles to each side, the layout chosen for the loading groups, piping, machine edges and other countless elements have been designed to ensure the highest hygiene standards, avoid bacterial

charges, facilitate cleaning operations and maintenance.

Each GSR presses are safeguard by a transparent protection mounted on a stainless steel frame that has a triple function: to totally protect the operator from any risk, to keep the heat around the press, reducing steam consumption, achieving therefore significant energy savings, and to protect the product against possible external contaminations.

"We work with heart and soul for our customers because their success is what make us proud" – affirms Giuseppe Turla, General manager of GSR. "We have always studied and developed valuable products for each customer and this results to be a winning strategy that has made us, during our 25 years of activity, a reliable business partner for many sector's realities," concludes Giuseppe Turla.

Thanks to these features, GSR is a technological enterprise well-placed among those companies that can cope with all the opportunities offered by the "industry 4.0", stubborn in the continuous search for innovative technologies capable of delivering excellent work performance and a great yield in terms of productivity.
