Demand grows for cocoa processing series

Italian cocoa processing equipment manufacturer GSR has reported a strong response to its expanded range of presses.

Among the company's key successes during the past year has been a notable installation project at the Indonesian Cocoa Application Lab inaugurated by Bühler, installing one of its 1/1400 machines, offering small-scale pilot testing.

A spokesperson for GSR said: "The strong suit was certainly the official launch of the Press 20/980: a con-

centrate of engineering and power designed for the pressing sector. With a production capacity we never conceived before, it is a "jewel - press", a technological and mechanical breakthrough for those who want to go beyond what has been previously possible within the industry

"The 20/980 has been developed from great technical expertise combined with a deep knowledge of customer needs.

Thanks to its relationships and experience, GSR care-

fully studied and created a product capable of satisfying the new trends raising in the sector."
